

## **BioMeridian Assessment**

I utilize a BioElectrical Impedance Measurement (BIM) that measures the electrical conductivity between specific points on the body by creating a 'circuit', and then measures the flow of electricity between those points. BIM devices have been consistently used in medicine to non-invasively obtain important health information, like EKG's and EEG's. There is substantial scientific information supporting BIM testing.

The [BioMeridian](#) assessment is a state-of-the-art tool designed to measure 58 different electrical 'circuits' in your body related to specific organs and systems. Your measurements are then compared against a database of over 1.5 million tests to identify areas of the body that have moved away from the norm. The results are accurate, objective, and help identify core imbalances that otherwise might be missed.

A standard BIM assessment can be completed in about 20 minutes. Test results are color-coded in an easy-to-understand take-home report containing specific

recommendations. With these reports, progress can be tracked easily and effectively.

The BIM assessment is safe, non-invasive and painless. It can be used on people of all ages.

Here's what people say about the BioMeridian:

*"It has had a huge impact on my life. I am very grateful for what it has done for me."*

*-J. Reese*

*"As a company, we are saving money and reducing our medical expenses. Our employees are feeling better physically and therefore are providing better productivity and lower absenteeism. It's been truly amazing and I would encourage anyone to look at and consider it."*

*-D. Younkers*

*"It has been miraculous for me."*

*-B. Smelzer*
